Model selection vs. Model adequacy

Take a bunch of different models and test which is the *best*

Gives the **relative** fit

0102
0110
2001

?

Assess whether a model is capturing the evolutionary dynamics that generated the data

Gives the **absolute** fit

Model Adequacy

We know that none of our models are really true. Can we be sure that the chosen model captures the salient features of the evolutionary process and provides reliable inferences

Could the model and priors plausibly have given rise to the data

Allows us to ask whether **any** of our models are doing a good job describing the evolutionary processes that produced our data

Posterior Predictive Simulations

Empirical Data

taxa 1	0	1	0	1	2	1
taxa 2	1	2	1	0	1	0
taxa 3	0	0	1	0	0	1
taxa 4	1	1	0	1	0	1

Höhna et al 2017

Posterior Predictive Simulations

Empirical Data	
taxa 1	0 1 0 1 2 1
taxa 2	1 2 1 0 1 0
taxa 3	0 0 1 0 0 1
taxa 4	1 1 0 1 0 1

1)  Standard MCMC inference while sampling from the posterior

Posterior Predictive Simulations

Empirical Data	
taxa 1	0 1 0 1 2 1
taxa 2	1 2 1 0 1 0
taxa 3	0 0 1 0 0 1
taxa 4	1 1 0 1 0 1

1)  Standard MCMC inference while sampling from the posterior

2)  Using the information sampled in 1) generate new data sets

Simulated Data 1	
taxa 1	1 0 0 1 2 1
taxa 2	1 2 1 0 2 0
taxa 3	0 1 0 1 1 1
taxa 4	1 0 0 1 0 1

Simulated Data 2	
taxa 1	1 1 0 1 2 1
taxa 2	1 1 1 0 1 0
taxa 3	0 1 1 1 0 1
taxa 4	1 2 0 1 0 1

• • • •

Simulated Data n	
taxa 1	1 1 0 1 2 1
taxa 2	1 1 1 0 1 0
taxa 3	0 1 1 1 0 1
taxa 4	1 2 0 1 0 1

Posterior Predictive Simulations

Empirical Data	
taxa 1	0 1 0 1 2 1
taxa 2	1 2 1 0 1 0
taxa 3	0 0 1 0 0 1
taxa 4	1 1 0 1 0 1

1)
Standard
MCMC
inference while
sampling from
the posterior

2)
Using the
information
sampled in 1)
generate new
data sets

Simulated Data 1	
taxa 1	1 0 0 1 2 1
taxa 2	1 2 1 0 2 0
taxa 3	0 1 0 1 1 1
taxa 4	1 0 0 1 0 1

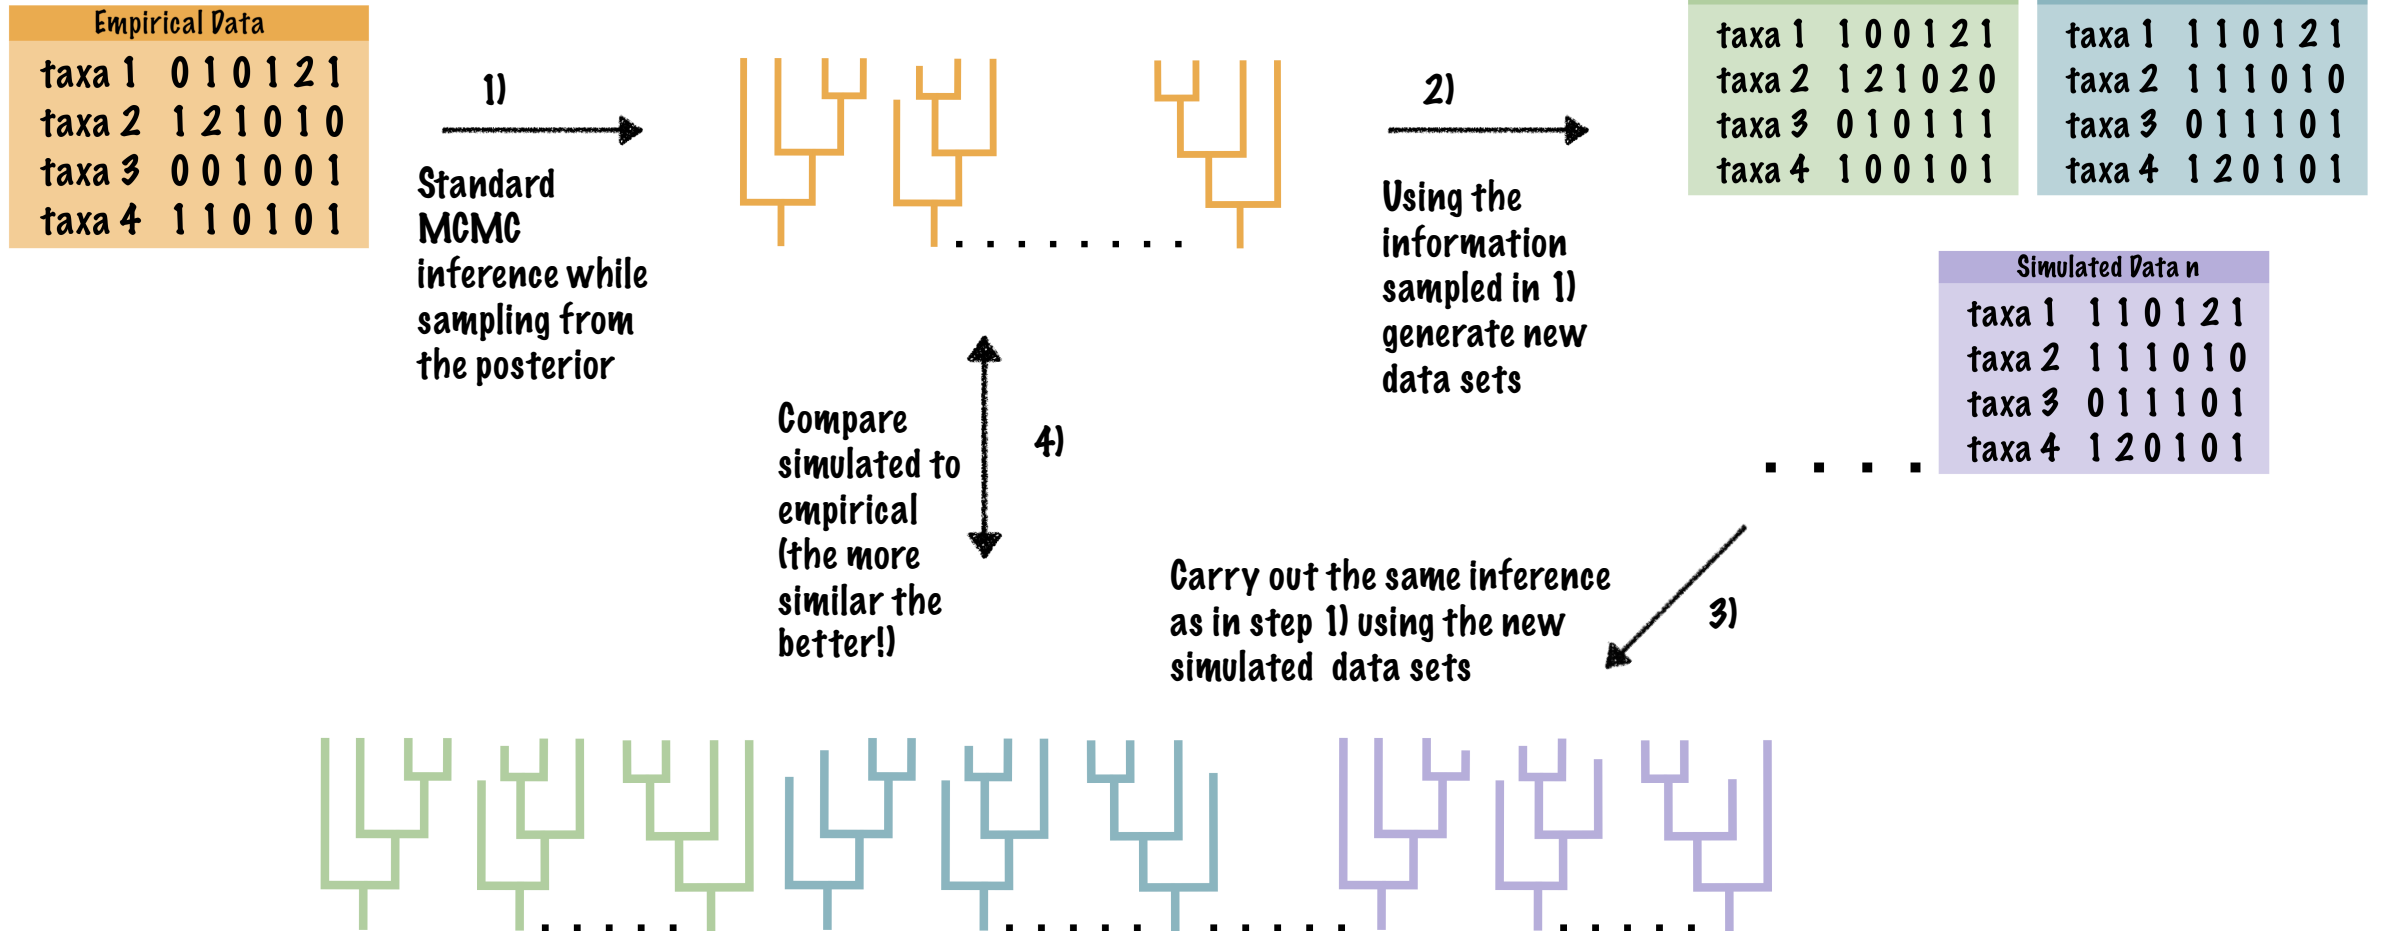

Simulated Data 2	
taxa 1	1 1 0 1 2 1
taxa 2	1 1 1 0 1 0
taxa 3	0 1 1 1 0 1
taxa 4	1 2 0 1 0 1

Simulated Data n	
taxa 1	1 1 0 1 2 1
taxa 2	1 1 1 0 1 0
taxa 3	0 1 1 1 0 1
taxa 4	1 2 0 1 0 1

3)
Carry out the same inference
as in step 1) using the new
simulated data sets

Posterior Predictive Simulations

Test Statistics

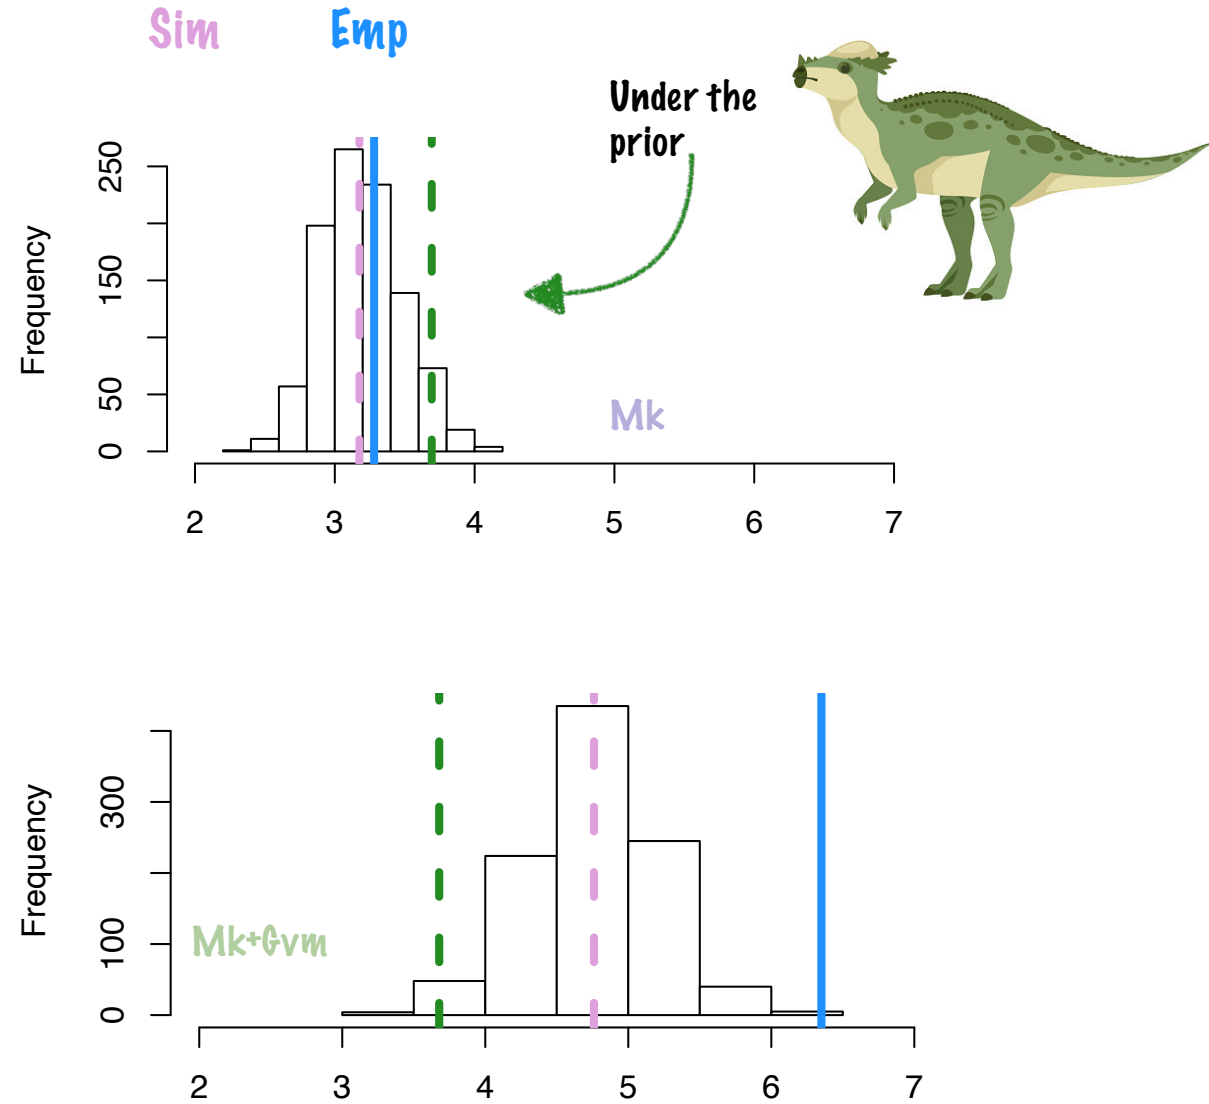

How can we compare trees and morphological matrices?

Need to get test statistics that compare the difference

More work has been done for molecular data – easier to compare

To compare simulations to empirical data we use effect sizes.

Test Statistics

Test Statistics

Both models produced similar RF results

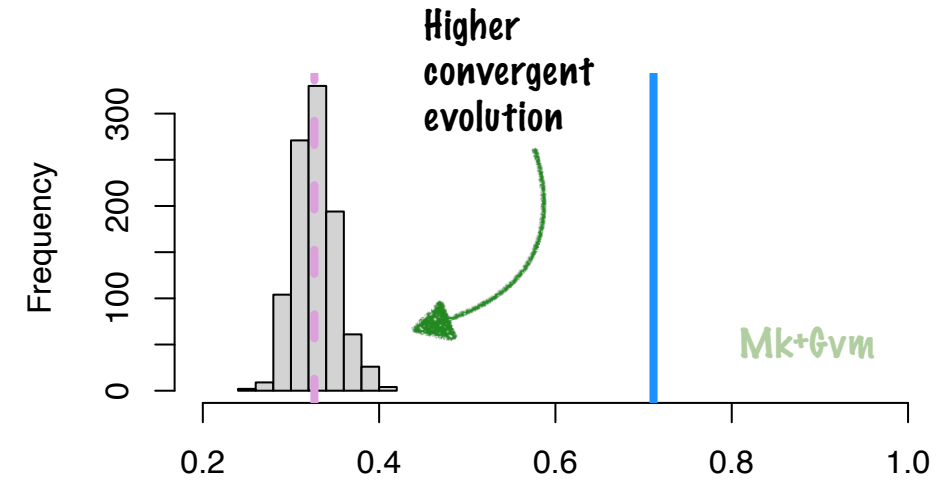

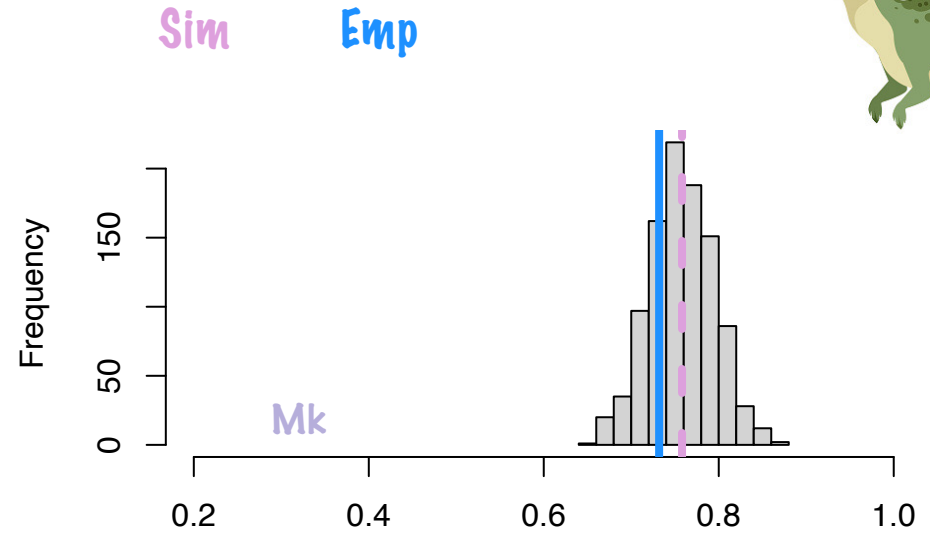

Test Statistics

Consistency Index

The more complex **over** estimated convergent evolution

More test statistics

Tree length

Robinson Foulds

Consistency Index

Retention Index

Hamming distances

Multiple distance metrics

Exercise 3

Check if either of the two models you chose for exercise 1 fit your data using a model adequacy approach
